Writing Asynchronous Code with Promises and async/await

Brice Wilson

@brice_wilson www.BriceWilson.net

Promise

A Promise is an object representing the eventual completion or failure of an asynchronous operation.”

https://developer.mozilla.org/en-US/docs/Web/JavaScript/Guide/Using_promises

Promises

Native support in ES2015

API for attaching callbacks to an object

May be chained together

Created by passing a function to the Promise constructor

Demo

Creating and using promises

Generators

Generator Functions

Functions that can be paused and resumed

- State of the function is stored while paused

Return generators

- Implement the iterator protocol

Lazy execution

- Values computed on demand

Demo

Pausing code execution with a generator function

async/await

Built with promises and generators

Reads more like synchronous code

Data returned from async functions is automatically wrapped in a promise

Using the await keyword will automatically extract data from a promise

Demo

Utilizing async/await
